### 4.2.1- Library automation

The library automation is the use of automatic and semi-automatic library activities as acquisition, cataloguing, and circulation. Library automation is used to imply just the mechanization of traditional and /or manual house-keeping routines of a library.

Our college established in 1989 and no post is librarian but college's professor is management system (ILMS)

However the most important for component for teaching learning process is the library, the traditional component includes books journals and number of books 16548. The college library uses this facilities for the programs run by the college.

The process of doing semi automating in library is being done by manual entry of books in the word-page. From this process, the library records for issue of books to student and its return to library will be easier.

From this process following may be possible:

1. Maintaining the issue records of books
2. Listing of books by Authors name
3. Listing of books by publishers
4. Listing of books by price
5. Listing of books by subject-wise
6. Listing of books by item-wise, i,e, UGC, Book-bank, SC/ST etc.

Receipt and billing records may be maintained
